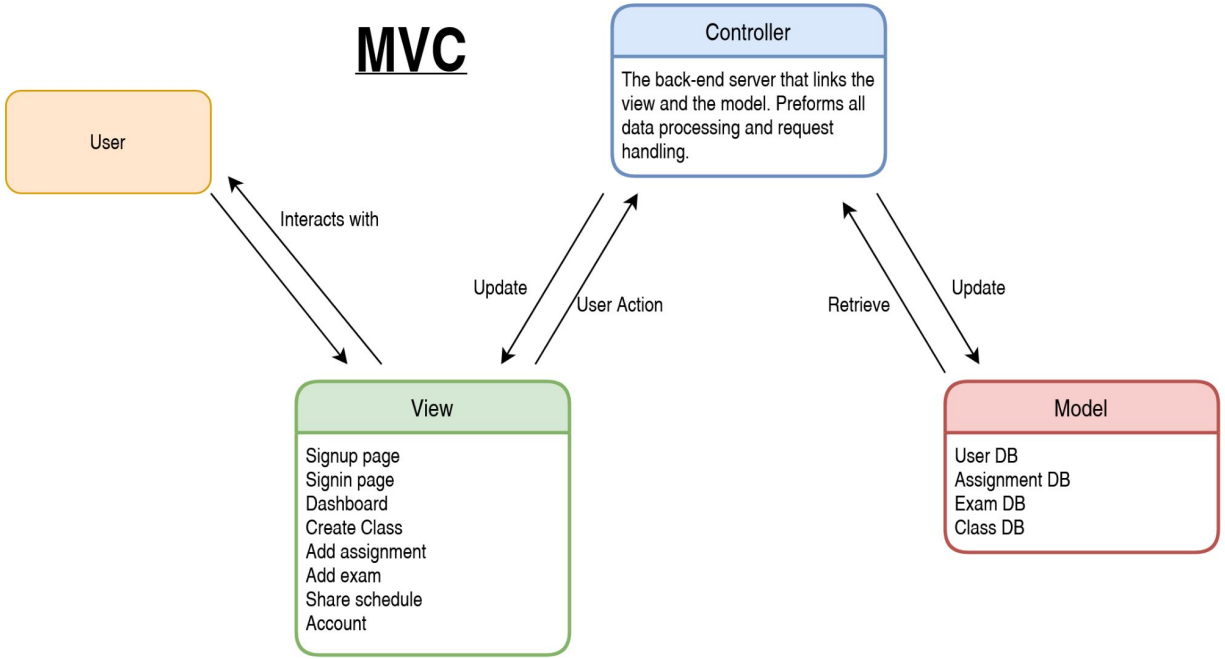
Project Overview

->Students are bad at time management and scheduling

->Created a scheduling app that is easy for students to use and allows them to excel in their studies

Project Deliverables	Detailed Description
Populate a class schedule	Users will be able to input their class schedules prior to the semester starting. They will be able to specify if the item is a lecture, lab, seminar, etc. The user should be able to specify a schedule that repeats each week or 2 weeks, etc. User should also be able to mark specific classes as “exempted” or “void”. This would be used if the professor cancels a class or lab.
View a class schedule	Users will be able to view their schedules including assignments, exams, and classes. Users will be able to choose if they would like to view the schedule as a month, week, day, semester, etc.
Schedule exams and assignments	Users will be able to input the dates of exams and provide details as to which class the exam is for and what topics are being covered. Users can also input assignments and give them a due date, associate them to a class, and provide details and links to files.
Share schedules with others	Users will be able to share a read-only copy of their schedule with others. This could be used by friends, family, or a professor to plan around the student’s schedule.
Reminders	When there are assignments about to be due or exams about to begin the application will send users a notification whether that be through email or web notifications.

MVC (Model View Controller)



Kanban

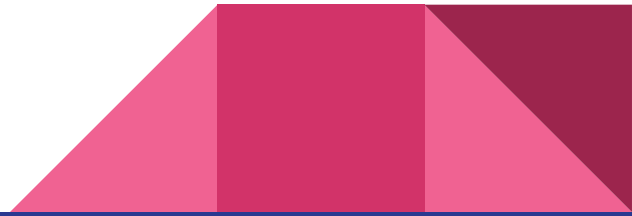
Prototype and Feedback

- Liked the idea
- Liked the layout (Gantt Chart Style)
- Would there be a way to reset your password?
    - Next MVP?
- Connect the app the URCourses

Product Demo

Future MVP’s

- More ways to view the timetable
- Reminders and notifications
- User account management
- Full mobile support
- Sharing schedules



Reflection

Any Questions?
